

If You Are Enrolled in the Study:

If you experience a change in health or symptoms possibly related to COVID-19, please contact the study doctor immediately.

Potential COVID-19 symptoms include, among others:

Fever _____●

New Loss of Taste/Smell _____●

New or Increased Cough _____●

Sore throat _____●

New or Increased Shortness of Breath _____●

Chills _____●

New or Increased Muscle Pain _____●

Vomiting _____●

Diarrhea _____●

COVID-19 VACCINE RESEARCH

Join a COVID-19 Vaccine Research Study

Thank you for taking the time to consider volunteering to join this COVID-19 Vaccine Research Study.

Address: _____

Telephone Number: _____

Email Address: _____

Thank you for taking the time to consider volunteering for a research study that will test an investigational COVID-19 vaccine.

About This Study

This study involves comparing an investigational vaccine against a placebo (inactive substance) to see if the investigational vaccine can prevent COVID-19. The vaccine is given by injection.

An Important Contribution

Every modern vaccine and medicine we have today was studied in hundreds to thousands of people before becoming available to the public. Currently, there are no approved vaccines available to prevent COVID-19, and the disease has spread across the world. This COVID-19 vaccine study will enroll up to 30,000 people, and each and every person involved plays a powerful role. Joining a clinical trial is an important and personal decision. We hope it is one you will consider.

What to Expect

You will be randomly assigned (by chance) to receive the study vaccine or placebo (inactive substance). This assignment will be made by a computer and not by the study team. Neither you nor the study doctor will know if you are receiving a study vaccine or a placebo.

You will receive 2 injections about 3 weeks apart. The study doctor will explain to you when you will have your two injections. After the second injection, you will have additional follow up visits to monitor your health.

Study Visits

- At each of the 6 planned study visits, the study team will ask about your general health and complete study procedures such as a physical exam.
- Blood samples will be taken at 5 of the planned study visits.
- You may be reimbursed for expenses (such as parking, meals, travel) related to study activities.
- On injection days, the study vaccine or placebo will be given through an injection into the muscle of the upper arm, and nasal swabs will be collected.
- After the injection, you will be asked to wait at the study site for at least 30 minutes.
- If you experience symptoms that may be caused by COVID-19, the study team will advise you on how to conduct the testing process.

Recording Reactions

You will be given:

- ☒ An electronic diary (e-diary) (a device or app on your phone)
- ☒ A digital thermometer
- ☒ A caliper (a device to measure any redness and swelling at the injection site)

You will complete the e-diary once a day for 7 days after receiving your study injection to record specific reactions you may experience.

If you experience potential COVID-19 symptoms while you are enrolled in this study, please contact your study doctor immediately.

Q&A: We Are Here to Help

If you have questions or concerns about anything related to this vaccine research study as you consider volunteering, please let the study team know. If you do not have questions now, you can call the study site or send the study team an email using the contact details on the back panel.
